

## **Project Name : Create a Text-file Based System For Storing and Updating Teacher Records .**

In this project I have written the data in notepad and save as in the formation of the text format with the extension as .txt after that I opened the VS2022 and I written the entire programming code and I linked the text file to here by using the file path.

After that I opened the Git Hub and create the new Repository To push the project . Following commands are used for pushing the project data

We can use these commands

git init

git add .

git status

git branch -m " main project2"

git remote add origin

git push -u origin main
